

JOEL ERNESTO DORANTES GUERRERO

SOFTWARE ENGINEER | DATA ANALYST

📞 5635955250 | ✉ joeldgio98@gmail.com | 🌐 linkedin.com/in/joel-ernesto-dorantes-guerrero-72b7841a2/

PROFESSIONAL SUMMARY

Systems engineer with extensive experience in backend development and data analysis. I have executed ETL processes in Big Data environments, combining a strong technical foundation with business insight to optimize processes and support decision-making. My goal is to establish myself in the field of data engineering and analysis, leveraging my technical skills, strong communication abilities, problem-solving aptitude, and adaptability to drive project innovation.

TECHNICAL SKILLS AND AREA OF SPECIALIZATION

Programming languages: Python, C#, JavaScript
Databases: SQL, No SQL
Data processing: PySpark, Pandas
Analytics: SAS
Project management: Jira, Confluence, Bitbucket

Data Lake: Hue
Version control: Git, GitHub, Bitbucket
Cloud computing: AWS
Containers: Docker
Business application: Interpretation of metrics, process analysis, and financial analysis.

EXPERIENCE

Banco Nacional de México / Spec Analytics Analyst (November 2025 - May 2026)

- I implemented ETL processes from multiple sources by segmenting various SQL queries within SAS.
- I ensured accuracy in the final data load by utilizing macros and joins within the SQL code segmentation.
- I carried out optimizations and scenario generation for the segments, using the datasets submitted for bimonthly campaigns to assign rates.
- I tracked and provided weekly updates on post-campaign metrics for rate assignments, ensuring the data was monitored and reliable for decision-making.

Fixat / Junior Programmer (March - June 2025)

- I developed new requirements using Python as the primary programming language and following a microservices architecture.
- I developed backend solutions by implementing AWS Lambda functions.
- I managed and visualized data related to the new requirements using documents in a MongoDB NoSQL database.

Grupo Carso / FrontEnd QA Tester (March - September 2024)

- I executed manual tests, smoke tests, and test matrices.
- I coordinated communication with development teams for the Claro Drive project to track and report issues before, during, and after production deployments.
- I developed a report generator by implementing the "TestCafe" tool within the existing automated testing project.

EDUCATION

Computer Systems Engineering - ESCOM, IPN (August 2020 - June 2025)

LANGUAGES

English

PROFESSIONAL PROJECTS

Banco Nacional de México

Historical Dashboard

- I developed a dashboard project for a key product with the aim of driving decision-making based on meaningful data.
- I designed and implemented end-to-end ETL processes to extract, normalize, and consolidate multiple data sources into a single repository.
- I developed an intermediate processing step using Apache Spark between the data lake and SAS to generate a CSV file.
- I loaded campaign data (2023–2025) into Excel spreadsheets to create a historical and comparative view using pivot tables.

Instituto Politécnico Nacional

Terminal project- Adaptive learning system

- I worked on developing and implementing a genetic algorithm to assign a learning path.
- I developed a series of unit and scenario-based tests for the system's logic and client-side components.
- Design and implement the workflows for building and connecting the frontend to the system server.
- I worked on the project from start to finish across all stages, including drafting the documentation.
